

Optics Lecture

Thin Film Optics

(Optics of interference coatings)

Topics: Interference, angled and polarized incidence, admittance diagram, antireflection coatings, high reflection coatings, dielectric coatings, laser mirrors, beamsplitters, polarizers, dichroic coatings, optical filters, high-performance coatings, transfer matrix method, numerical algorithms, optical coating materials

Prof. Harald Giessen

4th Physics Institute

When: Monday, 13.00 - 14.30h

Where: Pfaffenwaldring 57, 4.319

Literature: Angus MacLeod: Thin Film Optical Filters

Questions: contact Andy Steinmann, a.steinmann@physik.uni-stuttgart.de

Tel. 0711 6856 4963
